

Four Quotients

Building Fluency: division within 100

Materials: gameboard, pair of dice, division grid, 15 game markers - different color for each player,

Number of Players: 2

Directions:

1. Player rolls the pair of dice and locates the spaces on the grid named by them.
Example: A roll of a 3 and a 5 could be space (3,5) or space (5,3).
2. The player answers the division problem and places a game marker on that number on the gameboard.
3. The first player to get 4 spaces in a row is the winner.

Variation/Extension: Players could pick a space on the gameboard and give a division fact to match it in order to place a marker on the board. Example: I pick 7. $42 \div 6 = 7$. The winner could fill an entire row.
