

Length Tasks

1. Find something that is the same length as your height. Explain how you did this.
2. What can you find that is longer than two of your foot lengths but shorter than three of your foot lengths? Explain how you figured this out.
3. If you are standing in the middle of five children arranged by height, who might the other four children be? How did you solve this?
4. Sonya measured a bookcase and said that it was eight sticks long. Troy measured the same bookcase and said it was ten sticks long. How could this happen?
