

## How Far to 100?

### Materials

Ten Frame cards--one color (These are the cards that are full ten frames.)

Ten Frame cards—different color (These are the less-than-ten frames.)

### Optional Materials

Calculator

100 board

### Directions

1. Two students work together with a set of ten-frame cards.
2. One student makes a two-digit number with the cards.
3. Both students work mentally to determine what goes with the ten-frame amount to make 100.
4. Each student writes the solution(s) on paper and then checks by making the other part with the cards to see if the total is 100.
5. Students take turns making the original number.
6. Students record the number sentences.

Some students may need to use the 100 board to help determine how far from 100 the number is.

Students can use a calculator to check their number sentence.
